## **Quality Assurance**

Knights Networking places the satisfaction of our customers at the top of our business priorities. It drives the culture of our company. It is instilled in our employees and it is ingrained in our business practices. Customer satisfaction is also an objective we relentlessly pursue because we understand the importance of your mission. Knights Networking takes pride in delivering on time on budget and has developed a reputation for our ability to put the right people with the right knowledge and experience on the job.

Today, more than ever, our Government IT mission is critical to evolving national security requirements, which stretch government budgets and human capital resources to their limits. Our customers depend more than ever on our proven ability to rapidly field solutions and dedicate expert personnel to meet their requirements. Knights Networking has the depth and breadth of experience to provide the network centric solutions and resources they need.

## **Knights Networking's Financial Condition**

Knights Networking, through its conservative fiscal policies and resulting financial strength provides the Navy with reduced risk when compared to the overall industry. Unlike many of our competitors, Knights Networking's financial strength has enabled it to remain independent. This independence provides the customer with continuity of performance without a change in management, corporate structure, or ownership. This continuity allows Knights Networking to establish a consistent internal policy and conservatively manage our finances in order to insure our corporate independence and provide its customers with a high level of performance.
